

### **Claim Amendments:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A method of providing a workflow interface, the method comprising:  
receiving a baseline template data associated with a medical workflow step;  
receiving automated decision support data associated with the medical workflow step;  
integrating the baseline template data and the automated decision support data into an interface page associated with the medical workflow step; and  
initiating presentation of the interface page on a display of an electronic device.
2. (Original) The method of claim 1, further comprising:  
receiving patient finding data; and  
basing selection of the automated decision support data at least partially on the patient finding data.
3. (Currently Amended) The method of claim 1, ~~further wherein integrating comprises~~ comprising sorting elements associated with the baseline template data.
4. (Currently Amended) The method of claim 1, ~~further comprising wherein integrating~~ comprises highlighting a portion of the baseline template data.
5. (Currently Amended) The method of claim 1, ~~further comprising wherein integrating~~ comprises annotating a portion of the baseline template data.
6. (Original) The method of claim 1, further comprising initiating presentation of decision support text on the display.
7. (Currently Amended) The method of claim 1, ~~further comprising wherein integrating~~ comprises adding additional template elements to the interface page.

8. (Original) The method of claim 1, wherein the medical workflow step comprises recording a history of present illness.

9. (Original) The method of claim 1, wherein the medical workflow step comprises a review of systems.

10. (Original) The method of claim 1, wherein the medical workflow step comprises a diagnosis.

11. (Original) The method of claim 1, wherein the medical workflow step comprises a prescription writing step.

12. (Currently Amended) A device configured to display a user interface associated with a step in a medical workflow, the user interface comprising a baseline template data integrated with automated decision support data, the baseline template data and the automated decision support data being associated with the step in the medical workflow, the automated decision support data being based on medical finding data.

13. (Currently Amended) The device of claim 12, wherein the automated decision support data ~~annotates~~ includes an annotation of a portion of the baseline template data.

14. (Original) The device of claim 12, wherein the automated decision support data includes additional template elements.

15. (Currently Amended) The device of claim 12, wherein the automated decision support data functions to highlight a portion of the baseline template data.

16. (Currently Amended) The device of claim 12, wherein the automated decision support data functions to sort at least a portion of the baseline template data.

17. (Original) The device of claim 12, wherein the automated decision support data is associated with patient findings.

18. (Original) The device of claim 12, wherein the step in the medical workflow is associated with history of present illness.

19. (Original) The device of claim 12, wherein the step in the medical workflow is associated with review of systems.

20. (Original) The device of claim 12, wherein the step in the medical workflow is associated with diagnosis.

21. (Original) The device of claim 12, wherein the step in the medical workflow is associated with prescription preparation.

22. (Original) The device of claim 12, wherein the user interface device is a portable computational circuitry configured to communicate with a wireless network.

23. (Currently Amended) A system comprising:

a processor; and

a storage medium storing:

instructions operable to direct the processor to retrieve a baseline template data associated with a step in a medical workflow;

instructions operable to direct the processor to retrieve automated decision support data associated with the step in the medical workflow;

instructions operable to direct the processor to integrate the baseline template data and the automated decision support data into an interface page associated with the step in the medical workflow; and

instructions operable to direct the processor to initiate presentation of the interface page to a user interface device.

24. (Original) The system of claim 23, further comprising:

instructions operable to direct the processor to retrieve patient finding data; and

instructions operable to direct the processor to identify the automated decision support data in response to the patient finding data.

25. (Currently Amended) The system of claim 23, wherein integrating the baseline template ~~data~~ and the automated decision support data comprises sorting elements of the baseline template ~~data~~.

26. (Currently Amended) The system of claim 23, wherein integrating the baseline template ~~data~~ and the automated decision support data comprises highlighting a portion of the baseline template ~~data~~.

27. (Currently Amended) The system of claim 23, wherein integrating the baseline template ~~data~~ and the automated decision support data comprises annotating a portion of the baseline template ~~data~~.

28. (Currently Amended) The system of claim 23, wherein integrating the baseline template ~~data~~ and the automated decision support data comprises adding decision support text to the baseline template ~~data~~.

29. (Currently Amended) The system of claim 23, wherein integrating the baseline template ~~data~~ and the automated decision support data comprises adding additional template elements.
